

**APPENDIX:**

The Appendix includes the following item(s):

- ☒ - a new or amended Abstract of the Disclosure

## Abstract of the Disclosure

A thin-walled plastic tube having an axial direction and a radial direction is manufactured by injection moulding and includes a tube body with a tube shoulder with an emptying opening at a first end and an end closure at a second end, the tube body having a wall thickness of 0.3-1.2 mm. The plastic tube includes a label applied simultaneously with the injection moulding, the label having a plastic film with a tensile strength in the axial direction of the tube which is at least 100 N/mm<sup>2</sup>, preferably at least 150 N/mm<sup>2</sup>, and most preferably at least 210 N/mm<sup>2</sup> measured according to DIN ISO 527-1/ -3, an elongation at break which is at most 70%, preferably at most 50%, and most preferably at most 25% measured according to DIN ISO 527-1/ -3, and a thickness of at most 90 µm and preferably of at most 75 µm.
